

FOR IMMEDIATE RELEASE....
Ottawa Ontario, Canada. November 2017

CADlink announces all-inclusive color management, production workflow software for Brother™ GTX direct to garment printer.

DigitalFactory | Apparel
Brother™ Edition

Digital Factory Apparel Brother Edition™ maximizes the exceptional throughput capabilities as well as the high fidelity color output that the newly released Brother™ GTX printer is designed for.

The custom print driver as well as specially created color profile sets for white, black and colored garments are all available in the currently shipping Digital Factory Apparel Brother Edition™ Version 3 software product. The software extends color gamut and is able to reproduce a much greater color range than standard print drivers.

“Digital Factory Apparel Brother Edition™ is much more than RIP software”, states Michael Chramtchenko, CADlink Technology Director of Marketing, “No other RIP software product or driver-based print solution offers such advanced color management controls as well as pre-production workflow and image preparation tools. Most importantly, these tools can all be found in a single, easy-to-use package that addresses all of the production requirements that Brother™ DTG printer users may have.”

The software features an assortment of production automation features including the ink and time saving “knock me out” tools that automatically remove specific design colors that match garment colors eliminating the need for ink to be printed in those areas. Also included is advanced handling of white ink management that not only saves a great deal on white ink costs but also increases the image print quality and feel. Users can also select and create pre-defined print queues that are based on color or type of garment, resolution requirements as well as preferred color printing requirements--- realistic or vibrant. These features provide a great deal of printing options as well as greatly increasing productivity and reducing potential production errors.

The currently shipping version also supports existing GT-3 Series Brother™ printers providing existing Brother™ users who purchase the new GTX printer the ability to use a single software package to print to both machines. Existing Digital Factory Apparel users can add on the new GTX printer package for a small fee.
