

FOR IMMEDIATE RELEASE....
Ottawa Ontario, Canada. June, 2018

CADlink Technology solidifies position as undisputed leader in Direct to Garment software market

The release of the latest generation Digital Factory v10 Apparel software package includes a host of new color management, performance and automated production workflow enhancements. CADlink has built upon years of highly successful DTG software innovations to bring this new product to market.

Digital Factory v10 Apparel is available in a variety of configurations specifically designed to optimize the advanced color and production technologies found in market-leading direct to garment printers.

Brother® Edition

Epson® Edition

Polyprint® Edition

Digital Factory Apparel Brother™ Edition maximizes the exceptional throughput capabilities as well as the high fidelity color output that the newly released Brother™ GTX printer is designed for. The GT-3 Series of printers is also supported.

Digital Factory Apparel Epson™ Edition supports the latest Epson™ DTG printer, F2100 as well as the previously released F2000 and provides Epson™ users with extended color gamut printing capabilities as well as substantial workflow advantages over and above the Garment Creator™ driver shipped alongside the printer.

Digital Factory Apparel PolyPrint™ Edition includes optimized drivers and color profiles sets for the series of TexJet™ printers and also provides easy to use, automated production workflow tools for TexJet™ users.

“Essentially, all of the Digital Factory Apparel Edition™ products include the same powerful color management and production workflow tools”, states Michael Chramtchenko, CADlink Technology Director of Marketing, “The difference amongst them is that each unique package has customized printer driver and color profile sets that bring out the very best in the printer that they are designed for. CADlink also provides a “Production Edition” which makes available all supported printer drivers and profile packages for customers that would like to run various brands of DTG printers from a single workstation”.
